However, the whole concept of resilience is multi-dimensional. In its narrowest sense, resilience means snapping back into shape after some adverse incident or effect. It implies the buoyancy, strength and ability to recover an original position or form – but resilient cities are required to do more than that in the context of becoming healthier places to live and work. They must anticipate the future and have the capacity to adapt their disease-resistant and health-creating systems and designs accordingly.

Resilience takes on many different aspects when applied to the healthy city. There is the challenge of environmental resilience that will protect city dwellers from floods and fires, and other adverse climate conditions becoming increasingly common amid a growing sense of climate catastrophe. There is also the conventional healthcare resilience planning we see around international medical emergencies, such as the COVID-19 outbreak. As new hospitals are constructed in China in a matter of weeks as part of a rapid response to infectious disease control, we’re already witnessing the next chapter in healthcare resilience.

But what about operational and technological resilience to keep cities running efficiently, with transport systems moving, workplaces connected to the global digital grid, workforces able to access work, and goods and services flowing around the urban realm unencumbered? In other words, what are the steps to keep the economic pulse of the city beating?

Then there is social and community resilience. How can design strategies in the built environment create more social connection among people of all ages and abilities, improving air quality, decreasing isolation, reducing inequalities, delivering green spaces, and providing safe, affordable housing to boost community wellbeing? Connected to this, we also find the issue of food resilience: as life expectancy stalls among the poorest, how can our cities maintain supplies of fresh, locally produced food that will fuel citizens, avoid panic-buying in times of distress, and prevent ill health?

Resilience is not simply a big topic for the healthy city – the impact of COVID-19 means it is now the burning question of the day. In this, the 4th Healthy City Design International Congress, we’ll look at the resilient city from many angles – from creating more resilient homes, neighbourhoods, transport systems and workplaces, to the design decisions that underscore more resilient placemaking, and urban renewal. We’ll look at how smart technologies support the resilient city – and at how low-tech social innovations also have a big impact. We’ll share best practice through case studies and encourage
new practice through toolkits and frameworks. Scales of resilience will be examined from recovery to complete renewal, and the kind of transformative effect on city living implied by the term ‘renaissance’.

In this, our 4th Healthy City Design International Congress, we’ll ask how do we adapt and change to prevent, avoid and mitigate disaster, whether natural or man-made?

**Bridging the gap between research, policy and practice**

The Healthy City Design 2020 (HCD 2020) International Congress & Exhibition will take place virtually on 30 November – 3 December 2020. A global forum for the exchange of knowledge on the research, policy and practice of designing healthy and sustainable cities and communities, the congress is organised by SALUS Global Knowledge Exchange in partnership with the Helen Hamlyn Centre for Design, Royal College of Art. The first two days will open with keynote plenary sessions before splitting up into three parallel streams. The fourth day will largely be devoted to a special conference around the wellness of people at work, curated jointly with the People Energy Partnership (see p4). Delegates will be able to purchase tickets for the full four-day event or individual days at extremely attractive prices, with sessions available to watch on demand for 30 days after the event.

---

**Keynote speakers**

- **Professor Tony Capon**
  Sustainable Development Institute, Monash University, Australia

- **David Pencheon**
  Honorary professor, Health and Sustainable Development, University of Exeter, UK

- **Fiona Howie**
  CEO, Town and Country Planning Association, UK

- **Ben Page**
  CEO, Ipsos MORI, UK

- **Nigel Crisp**
  Independent crossbench member, House of Lords; Co-chair, All-Party Parliamentary Group on Global Health, UK

- **Carolyn Steel**
  Architect and author, UK

---

**Organised by**

- **Prof Jeremy Myerson**
  Helen Hamlyn Chair of Design
  The Helen Hamlyn Centre for Design, Royal College of Art

- **Marc Sansom**
  Director
  SALUS Global Knowledge Exchange

Designing a resilient, healthy and energised workforce

In just a few months, COVID-19 has changed the world of work beyond recognition. In some cases, existing trends away from the traditional office settings to the home have been accelerated. In other settings, notably public-facing environments, such as healthcare, education, retail and transport, the workplace environments and operations have required a radical redesign to protect both workers and the public against this new threat to public health.

In the case of greater home-working, there are arguably potential benefits for workers, businesses and for planetary health, but in other settings, the costs arguably outweigh the benefits.

And what are the unforeseen consequences for people, including both the workers themselves and their families of this change in the way we work. Beyond the threat to our physical health, what is the impact on our emotional health and mental wellbeing?

In direct response to this challenge, SALUS Global Knowledge Exchange and the People Energy Partnership have launched the People at Work Summit: Designing a resilient, healthy and energised workforce, fully integrated into the 4th Healthy City Design Congress on the final day, Thursday 3 December.

The programme for the Summit will be structured around the Five Foundations of Fuel, Motion, Restoration and Resilience under the umbrella of Community. As the fifth foundation, Community will thread through each of the four sessions. How do we continue to build human community, kindness and gratitude in diverse workplace settings? What does a ‘sense of community’ mean in a virtual world? At home, in the office, in a hospital, school or retail outlet, can we connect community through outside space and access to nature, so we can build and maintain trust with our neighbours or work colleagues while still physically distancing.

Sessions will comprise a relaxed style of interviews, conversations, live demos and short presentations.

Event hosts and facilitators

Kate Cook BA Hons, Dip ION, MBANT
Director and founder, The Nutrition Coach

Jon Bocklemann-Evans
Director and founder, JBE Health
### Keynote plenaries

**Session 1: Opening keynote plenaries**  
**Recovery, renewal and renaissance**  
Chair: Jeremy Myerson, Royal College of Art, UK

- **08.45** Welcome and introduction  
  Jeremy Myerson, Royal College of Art, UK

- **09.00** Keynote address: Beyond COVID-19: a healthy, fair and green recovery is possible  
  Tony Capon, Professor, Sustainable Development Institute, Monash University, Australia

- **09.15** Keynote address: Designing health systems to create a safe, equitable and prosperous planet for all  
  David Pencheon, Honorary professor, Health and Sustainable Development, University of Exeter, UK

- **09.30** Keynote address: Healthy homes, sustainable places: empowering people and communities  
  Fiona Howie, CEO, Town and Country Planning Association, UK

- **09.45–10.15** Panel discussion

**Stream 1: Pandemic impacts, preparedness and response**

**Session 2**  
**Urban agendas: the impact of COVID-19**  
Chair: Marcus Grant, Cities & Health, UK

- **10.45** The post-COVID-19 city: integrating healthy, inclusive and sustainable urban agendas  
  Donovan Storey, Global Green Growth Institute, South Korea

- **11.00** Responding to COVID-19: a transdisciplinary triad  
  Roderick Lawrence, University of Geneva, Switzerland

- **11.15** COVID-19 impacts and speedy construction of temporary quarantine camps – the Hong Kong experience  
  Paul Lee Chun-kau, Paul, Marsden Kong Mau-shing, Christina Poon Hoi-ling, Lawrence Ko Hin-man, Architectural Services Department of the HK SAR, Hong Kong

- **11.30** Filipino neighbourhoods in quarantine: a COVID-19 pandemic study  
  Rhay Daniel R Racoma, Centre for Neighbourhood Studies, Philippines

- **11.45–12.15** Panel discussion

**Session 3**  
**International city responses: difficult choices**  
Chair: Carolyn Daher, Barcelona Institute for Global Health, Spain

- **13.30** Lockdown urbanism: pandemic-induced lifestyle change, spatial aftershocks and design responses in Wuhan, China and Manchester, UK  
  Prof Tom Jeffreies, Queen’s University Belfast (QUB); Dr Laura Councll, Dr Jianquan Cheng, Manchester Metropolitan University, UK

- **13.45** Community-based healthcare system. Learning the lesson from COVID-19 in Tuscany  
  Nicolletta Setola, Maria Chiara Torricelli, Guglielmo Bonaccorsi, Chiara Lorini, University of Florence, Italy

- **14.00** Pandemic preparedness: integrating housing, work, urban wellbeing and daily life  
  Mokolade Johnson, University of Lagos, Nigeria

- **14.15** Systemic approaches to COVID-19 in big cities: Bogota, New Delhi and Kinshasa  
  Clara Alfaro-Adegbulu, Sara Van Belle, Bruno Marchal, Claudia Nieto Sanchez, Institute of Tropical Medicine, Antwerp, Belgium

- **14.45–15.15** Panel discussion

**Session 4**  
**Urban communities: place-based resilience**  
Chair: Sunand Prasad, UK Green Building Council; Penoyre & Prasad, UK

- **15.45** Activity-friendly neighbourhoods can benefit non-communicable & infectious diseases  
  Dr Deepti Adlakha, QUB, UK; Prof James F Sallis, University of California, USA

- **16.00** A Bayesian approach to public health resilience: the risk journey map  
  Michelle Ossmann PhD, MSN, Herman Miller; Eric Ossmann MD, FACEP, Prisma Health, USA

- **16.15** New urban codes to reduce the spread of COVID-19 in Paraguay  
  María Gloria Melián, Stella González de Olmedo, José Ortellado, Universidad Católica Nuestra Señora de la Asunción, Paraguay

- **16.30** Research parks to inform community design: precedents for an unexpected crisis  
  Peter Baird, Andrea Imaz, Perkins and Will; Nick Goodwin, Norwich Research Park, UK

- **16.45–17.15** Panel discussion

**Session 5**  
**Nighttime design: a virtual nightwalk**  
Chair: Leni Schwendinger, International Nighttime Design Initiative (NTD)  
Panel: Duncan Ransom, Danny Drohojowski, The Endless Co, USA

- **18.00–19.00** This workshop focuses on the NightSeeing programme, which supports design professionals by facilitating communication about night concerns with local communities.
**Session 6**  
**Modernising the workplace in a pandemic**  
**Chair:** Harry Knibb, Oxford Properties, UK

17.15–17.45 Panel discussion
Session 10
Sustainable and resilient healthcare ecosystems
Chair: Richard Darch, Archus, UK

14.00 Carbon footprint of the health sector – a global assessment
Tamer Rabie, Caroline Anitha Devadason, Stephen Dorey, World Bank Group, USA/UK
Manfred Lenzen, University of Sydney, Australia

14.15 Health ecosystems – a new health estate paradigm
Dan Gibson, Kieren Morgan, MJ Medical, UK

14.30 Spatial analysis of the distribution of government hospitals in the city of Irbid using the GIS
Sally Ibrahim, Bushra Obeidat, Jordan University of Science and Technology, Jordan

14.45 Birthplace design in resilient cities
Doreen Balabanoff, Professor, OCAD University Toronto, Canada; J Davis Harte, Programme advisor and thesis faculty design for human health, masters, The Boston Architectural College, USA

15.00–15.30 Panel discussion

Session 11
Upstream drivers of health
Chair: Lauren Janney, LENS Strategy, USA
Panel: Lauren Janney, LENS Strategy, USA; Sonja Bochart, Shepley Bulfinch, USA; Julie Janiski, Buro Happold Engineering, USA; Carrie Janiski, Romeo Medical Clinic, USA

16.30–18.00
To think upstream, get down to earth
A global pandemic is not only a healthcare problem; it’s also a social problem. People in underserved areas and minority populations have been disproportionately affected during the pandemic, highlighting the social determinants of health that have plagued global health for centuries. Further upstream from social determinants is another important cause of health inequity: the built environment. Our built environments contribute to everything from unhealthy social behaviours to the increasing number of natural disasters seen around the world. This workshop explores the connection between healthy people and a healthy planet, through the lens of the built environment. Following an introduction to upstream drivers of health and their related design strategies, our cohort of interdisciplinary design and healthcare leaders will pose the following questions for discussion:
1. What are the primary design considerations in the built environment that contribute directly to health outcomes?
2. How do design decisions that degenerate our environment strip us of our health?
3. How can design positively influence user behaviours that lead to better health outcomes?
The session will also provide an overview of frameworks, including Healthy People | Healthy Planet, a regenerative approach to making planetary design decisions in the built environment. To conclude, a mindmap of intersectional opportunities will be co-created to support social and ecological health that is responsive to place and people.
By the end of the workshop, participants will be able to:
1. Understand the built environment’s impact on the health of our planet and population health.
2. Understand the remedial benefits of creating a human connection to nature and the positive human health outcomes within the healthcare setting.
3. Identify synergies between design frameworks and health goals to encourage an integrated approach.
**Keynote plenaries**

Session 21
Planning for healthy and equitable urban environments: innovations in turning knowledge into action
Chair: Michael Chang, Public Health England, UK
Panel: Gemma McKinnon, Rachel Flowers, Health and Wellbeing in Planning Network, UK; Laura Taylor-Green, Essex County Council, UK; John Vick, Tennessee Department of Health, USA; Amy Outterside, UK

11.30–13.00
The practice of integrating public health and wellbeing considerations into the spatial planning process is evolving. We now appreciate the connected roles and fundamental skillsets of those working in town planning, the built environment and public health, in improving and protecting people’s health. The Health and Wellbeing in Planning Network exists to bring together these different disciplines to highlight creative and transferrable practices and ideas to tackle society’s public health challenges.

The past year has provided us with a unique experience in that we have all been affected by one single thing, bringing us together while reminding us of the disparity between our lives. We already understand how communities from poor environments that experience high levels of poverty will suffer negative impacts to their health and wellbeing. More than ever, there is a need to maximise partnership working towards wellbeing and using the appropriate tools to do so. This workshop brings together speakers with international and cross-sector perspectives. It will seek to provide reflections and insights on how we can reduce vulnerability to physical and mental health issues through novel approaches and ideas in local government practice, despite challenges around COVID-19. It will explore whether the creation of these approaches, such as planning for health frameworks, can truly re-orient decisions towards improving wellbeing.

Session 22
The Healthy Homes Act
Chair: Julia Thrift, Director of healthy place making, Town and Country Planning Association (TCPA), UK
Panel: Lord Nigel Crisp, All-Party Parliamentary Group on Global Health, UK; Fiona Howie, CEO, TCPA, UK; Hugh Ellis, Policy director, TCPA, UK

14.00–15.30
Too many homes and neighbourhoods built today undermine residents’ health and wellbeing. The TCPA has developed new legislation, in the form of a Healthy Homes Bill, to stop this. Where we live has profound effects on our health throughout our lives, both in terms of our short-term safety and long-term quality of life. Yet there is overwhelming evidence that too many new homes and neighbourhoods in England are seriously undermining residents’ wellbeing and life chances. The way we regulate the built environment needs radical change. This campaign calls on government to adopt our Healthy Homes Bill, which would require all new homes and neighbourhoods to be of decent quality, and effectively outlaw those which undermine residents’ health and wellbeing.

Session 23
Health inequity: inclusive design for diversity & disability
Chair: Jeremy Myerson, Royal College of Art, UK

16.00
The ‘diversity crisis’ in architecture: co-creating new strategies for how to diversify who creates the built environment and the health benefits this could yield
Umi Baden-Powell, insider-outsider; Design Council, UK
Neba Sere, Greater London Authority; Black Females in Architecture, UK

16.15
Integrating inclusion and resilience through inclusive design practice: challenges and opportunities for designing with disabled people in lower- and middle-income countries
Mikaela Patrick, Iain McKinnon, Global Disability Innovation Hub, UCL, UK

16.30
Sheltering in structurally vulnerable places: how neighbourhood environments contribute to racial/ethnic inequities in SARS-COV-2 exposure and COVID-19 morbidity and mortality
Rachel L Berkowitz PhD, MPH, Xing Gao MPH, Eli K Michaels MPH, Mahasin S Mujahid PhD, MS, FAHA, University of California, Berkeley, USA

16.45–17.15 Panel discussion
Session 24
Sustainable urban mobility: designing active communities
Chair: Mario Bozzo, SALUS Global Knowledge Exchange

08.45 Sustainable urban mobility to improve health in Grenoble, France
Cecilia Di Marco, Grenoble Alpes University, France

09.00 Sharing believable stories: understanding contextual relevance of case studies to influence the creation of new walking and cycling routes
Anna Le Gouais, Dr Louise Foley, University of Cambridge, UK; Dr Cornelia Guell, University of Exeter Medical School, UK

09.15 Perceived influence of driverless vehicles on older adults’ outdoor mobility
Dr Razieh Zandieh, University of Manchester, UK

09.30 Do public health teams and transport planners collaborate on developing Local Cycling and Walking Infrastructure Plans (LCWIPs)?
Angela Hands, Public Health England, UK

09.45–10.15 Panel discussion

Session 25
Smart communities: choice, control and agency
Chair: Stephane Sadoux, Grenoble Alpes University, France

11.00 ASPIRE: Leveraging technology to engage communities in addressing the link between obesity, unemployment and the built environment
Christine Hancock, Elisabeth Morgans, Nathalie Vauterin, C3 Collaborating for Health, UK

11.15 Emotional wellbeing for location-based Sina Weibo affection classification after COVID-19 outbreak
Jiatian Bu, Qinglai Zhang, Tongji University, China; Yuting Hu, Bicheng Zhang, Shanghai Tongji Urban Planning and Design Institute, China

11.30 Active communities: children’s experiences of the social and physical neighbourhood on their journeys to school
Natsika Michail, Ayse Ozbil Torun, Northumbria University, UK; Rosie Parnell, Newcastle University, UK

11.45–12.15 Panel discussion

Session 26
Investing in smart and resilient city infrastructure
Chair: Clare Wildfire, Mott MacDonald, UK

14.30 Urban resilience fund Project Screen framework to fund and build resilient communities
Peter Hall, Wood, UK

14.45 Newcastle Helix: a sustainable urban campus
Jonathan Seebacher, Ryder Architecture, UK

15.00 Beyond brittle, beyond resilient: making the City of Venice antifragile
Tye Farrow, Farrow Partners Architects, Canada

15.15 Growing into the sea – a provocative idea for waterfront resilience
Blake Jackson, Stantec, USA

15.30–16.00 Panel discussion

Session 27
Modelling the city for health and social equity
Chair: Dr Oliver Jones, Ryder Architecture, UK

16.30 Simulation of our cities at a personal level: agent-based modelling from Arup’s City Modelling Lab
Nick Bec, Arup, UK

16.45 Leveraging healthcare information to design healthy and resilient societies
Nolan Rome, WSP, USA; Kevin Cassidy, WSP, Canada

17.00 Healthy densification? Transit-oriented development, green spaces and health impacts
Anushka Thakkar, University of California, Berkeley, USA

17.15 An equitable electric vehicle charging infrastructure
Andrew Partridge, Ivan Harbour, Rogers Stirk Harbour + Partners, UK

17.30–18.00 Panel discussion
DAY 3, STREAM 8: URBAN DESIGN, PLACEMAKING & PUBLIC REALM
2 DECEMBER 2020 BREAKOUT SESSION (all times are Greenwich Mean Time; all sessions streamed online)

Session 28
Resilient cities, therapeutic places
Chair: Suzanne Pini, HDR, Australia

08.00 Resilient cities: how are cities to cope after COVID-19? The good news and the future
Mustapha Kamal Zulkarnain, Arkitek Mustapha Kamal, Malaysia

08.15 Making an urban sense of COVID-19
Mahak Agrawal, Spatial Perspectives, India

08.30 The therapeutic city
Rob Delius, Stride Treglown, UK; Dr Amy Frost, Bath Preservation Trust, UK; Funda Kemal, Bath
& North Somerset Council, UK; Lucy Barron, Donald Insall Architects, UK

08.45–09.15 Panel discussion

Session 29
Designing for children: international policies & practice
Chair: Dr Liz Paslawsky, SALUS Global Knowledge Exchange, Australia

10.00 Children’s outdoor play, exercise and mobility during the pandemic: a UK-wide and
international study of emerging policy and practice
Tim Gill, University of Reading, UK

10.15 Built environment: one of the 10 ways that we will overcome child obesity in London
Rachel Torns, Paul Lindley OBE (TBC), London’s Child Obesity Taskforce, UK

10.30 Study on design of children play space in Hong Kong
Raymond Lau, HK SAR Government, Hong Kong

10.45 Resilient schoolyards as a driver for healthier and cohesive neighbourhoods: the
OASIS approach
Raphaëlle Thicler, City of Paris, France; Maria Sitzoglou, City of Paris, European Commission –
Urban Innovative Action Initiative, France

11.00–11.30 Panel discussion

Session 30
Healthy places: guidelines, strategies and assessments
Chair: Mark Drane, Urban Habitats; SALUS Global Knowledge Exchange, UK

13.30 ‘Putting health into place’ – a practical guide for creating resilient places with strong,
supportive communities
Julia Thrift, Town and Country Planning Association, UK

13.45 Shielding the nation’s wellbeing through improving the use of health impact
assessments in healthy urban development
Michael Chang, Public Health England; Thomas Fischer, Environmental Assessment and
Management Research Centre, University of Liverpool, UK; Emma Dyson, Liverpool City Region
Combined Authority, UK; Carolyn Sharpe, Public Health England, UK

14.00 Simple Integrated Resilience Scan (SIRS)
Jakob D’Herde, Hilde Heynen, KU Leuven, Belgium

14.15 The Leeds approach: placemaking for resilient communities
Jenny Fisher, Sarah Wilson, Liz Bailey, Leeds City Council, UK

14.30–15.00 Panel discussion

Session 31
The art and science of healthy placemaking
Chair: Marc Sansom, SALUS Global Knowledge Exchange, UK

15.30 Healthy placemaking: from theory to practice
Fred London, JTP, UK

15.45 Healthy placemaking 2020
Jane Ellery, Ball State University / Project for Public Spaces, USA; Peter Ellery, E2praxis, USA

16.00 Challenges and opportunities of integrating health and wellbeing in new development:
 a qualitative study of the perceptions of built environment professionals
Helen Pino, Gemma Moore, UCL, UK

16.15 How choice architecture induces healthy action
Avani Parikh, Avani Parikh Architecture, USA

16.30–17.00 Panel discussion
DAY 3, STREAM 9: WORKSHOPS: STRATEGIES, GUIDELINES AND FRAMEWORKS
2 DECEMBER 2020 BREAKOUT SESSION (all times are Greenwich Mean Time; all sessions streamed online)

Session 32
Getting research into planning practice
Chair: Michael Chang, Public Health England, UK
Panel: Anna Stimpson, Public Health England; Angela Baker, Public Health England South East; Dr Danni Sinnett, University of the West of England; Julia Thrift, TCPA; Jennifer Taylor, Gloucestershire County Council; Joanna Aro and Claire Farrow, Hull City Council, UK
11.30–13.00
Getting research into planning locally led approaches to healthy urban planning
Getting research into planning practice is a key challenge facing practitioners working in local settings within different national frameworks. Public Health England is committed to help local authority public health and planning teams influence the planning process in an evidenced-based way by ensuring that improvements in health and wellbeing underpin all urban development projects. Never has this commitment been more timely as we emerge from our shared COVID-19 experiences of the environment, which can help inform future practice. There is an abundance of research, with both hard and soft evidence, but further thought should be given on how to maximise its application by built environment professionals.
Presentations will be framed around the PHE support package based on engagement in local authority areas. Workshop participants will explore how these resources can be applied in respective contexts and gain a better understanding of the collective benefits of a collaborative approach to healthy planning. Presenters will provide insight on how COVID-19 will shape the respective approaches on ways of working, policy approaches and emerging trends.

Session 33
Participatory design in city-wide public space strategies
Chair: Cecilia Andersson, UN-Habitat, Mexico
Panel: Cecilia Andersson, UN-Habitat, Kenya
14.00–15.30
Healthy and thriving public places by participatory design
Public spaces facilitate social capital, economic development, and community revitalisation. Key city elements for health and wellbeing, they’re among the main determinants of our activities in cities and, in turn, play a key role in reducing non-communicable diseases. This workshop builds on the Public Space Programme at UN-Habitat, which helps cities to become more sustainable by providing policy advice, capacity building, knowledge sharing and support for public space regeneration and improvement. It maps public spaces and works with cities to develop city-wide public space strategies and urban development frameworks.
The workshop will present the ‘Block by Block’ methodology for digital participation and community engagement in the planning and design process. The methodology ensures that community voices are heard throughout the process, and their needs are reflected in the design using Minecraft software, where participants can build structures in a three-dimensional world. The workshop will demonstrate how to use participatory and technology platforms for the renewal of public spaces to enable healthier and lively spaces, and foster a healthy post-COVID-19 recovery. Moreover, the workshop will provide an understanding of the procedures UN-Habitat uses to include participatory design in city-wide public space strategies and what should be done next.

Session 34
The International WELL Building Institute (IWBI) Task Force on COVID-19
Chair: Dr Angela Loder, International WELL Building Institute, USA
Panel: Jason Hartke, Victoria Lockhart, International WELL Building Institute, USA/UK
16.00–17.30
Prevention and preparedness, resilience and recovery. Lessons and guidelines for recovery from the IWBI Task Force on COVID-19 and infectious airborne disease
In early 2020, it became clear that business as usual was an inadequate – if not, outright dangerous – approach to the COVID-19 pandemic. It also became clear that the countries and organisations that managed to contain the spread of SARS-CoV-2 used a holistic, multi-stakeholder approach that crossed traditional boundaries between levels of government, organisations, and areas of expertise. Lastly, given the novel nature of the disease and the uncertainties around its transmission and impact, an open-minded, adaptive approach to translating evidence to practice was needed.
The WELL Building Standard (WELL) aims to encourage the development of healthier buildings and organisations through design, policy and performance. Given the role and experience of WELL in translating research to policy, guidance was developed on what building owners could do to protect their workers, their real estate investment, and themselves. As part of this response, a Places Matter initiative was created, which included evidenced-based strategies for organisations to address COVID-19, a webinar series with leading experts, and a task force.
Shared by renowned experts, thought leaders and authorities across public health, medicine, design, real estate, government and academia, the Task Force on COVID-19 set about to inform new Guidelines for Prevention and Preparedness, Resilience and Recovery. The Task Force also recommended possible modifications to WELL, so that buildings could be better prepared for future airborne infectious disease outbreaks. Drawing on the expertise of the Task Force, this workshop highlights key actionable insights and evidence-based strategies for recovery from COVID-19, while providing recommendations and insights for different stakeholders, including the design community, government and policy, real estate, investment and finance, sustainability accounting, and research.
DAY 4, STREAM 10: DESIGNING A RESILIENT, HEALTHY AND ENERGISED WORKFORCE
3 DECEMBER 2020 MAIN STAGE (all times are Greenwich Mean Time; all sessions streamed online)

The programme for the People at Work Summit will be structured around the Five Foundations of Fuel, Motion, Restoration and Resilience under the umbrella of Community. As the fifth foundation, Community will thread through each of the four sessions. How do we continue to build human community, kindness and gratitude in diverse workplace settings? What does a ‘sense of community’ mean in a virtual world?

Event hosts and facilitators

Kate Cook BA Hons, Dip ION, MBANT
Director and founder, The Nutrition Coach;
Co-founder, People Energy Partnership

Jon Bocklemann-Evans
Director and founder, JBE Health;
Co-founder, People Energy Partnership

**Session 35**

**Fuel**

08.55–10.00

‘Boosting immunity’ has never been more important, not only to fight off COVID-19 if it comes knocking but, just as importantly, to cope with and manage economic challenges, lifestyle stresses and workplace changes that the pandemic has created for so many of us globally. Through interviews and expert panels, this session will explore the relationship between food, stress and vibrant energy. What do we mean by a connection between mind and body? How do we access good food, creating time for cooking ‘real food’ and the importance of what to eat, and the impact of the workplace setting on how to fuel ourselves?

**Session 36**

**Motion**

11.30–12.30

Working from home has for many meant a less active lifestyle, without the walk to work or daily commute. How does motion impact on health? And how do we measure it? How do we build more movement and exercise into our daily lives so we’re at our most creative and productive at work? How can movement and exercise improve our emotional health if we’re feeling isolated from our colleagues or overworked? Is there a new and flexible balance between home and office working to be created, allowing us to be at home for more focused tasks and in the office for more collaborative tasks?

**Session 37**

**Restoration**

13.30–14.15

Modern life often gets in the way of sleep. The competitive pressure to get on in life, to create and produce more, or enjoy life more than the next person has often left people feeling sick, tired and depressed. Yet sleep is the essential ingredient for a productive and creative working life and underpins our emotional health and wellbeing. Neuroscientist Dr Matt Walker reveals how sleep deprivation can lead to depression, heart disease, cancer and Alzheimer’s. In this session, we reflect on the positive benefits of a good night’s sleep, a daytime rest, or a simple change of environment to shift our brain from left to right.

**Session 38**

**Resilience**

15.45–16.30

How resilient are we? How ready are we to spring back from a setback or get up off the floor after we get knocked down? The pandemic is testing the resilience and wellbeing of even the most hardened warriors. In this session, we explore the concept of ‘emotional health’. How do you know your emotional needs and assess how well they are being met? How are your emotional needs influencing your ability to build coping strategies to deal with life’s challenges? This session will offer some straightforward resilience strategies, identifying why focusing on resources and not demands is the key to being resilient.
Session 39
Creating a healthy ecosystem of work
Chair: Muriel Altunaga, CBRE, UK
Panel: Yvonne Pinniger, Heta Architects, UK; Namrata Krishna, Design and behaviour change strategist, UK

10.00–11.30
Our new reality: envisioning a healthy ecosystem of work

We will never come back to the way we lived before January 2020. In a matter of weeks, the COVID-19 pandemic transformed ways of working across the world that decades of workplace strategy and consulting failed to change. In lockdown, we’ve all experienced a dramatic shift in how we think about what we need from work, the spaces we work in, and who we work for.

This workshop is ‘set’ in two years’ time, in a post-COVID vaccine world. We’ve adapted to a new normal, but how we interact has irrevocably changed. We now know that we’re vulnerable and that another pandemic could happen at any time.

Building on the valuable lessons learned – across myriad disciplines including health, economics, spatial design, and data science – the workshop will focus on creating a healthy ecosystem of work, including and beyond the office. It will explore what an ideal ‘work day in the life’ looks like for two extreme personas. An output from the workshop will be a report for participants, providing suggestions on how we can begin engaging with clients and end users to design a healthier, more meaningful, and pluralistic workplace.

Session 40
Integrated healthy neighbourhoods
Chair: Cany Ash, Ash Sakula Architects, UK
Panel: Maria-Magdalena Atanasova, Lydia Scott, Ash Sakula Architects, UK; Dr Frances Holliss, London Metropolitan University, UK

12.30–14.00
100 WorkHomes: integrated healthy neighbourhoods built on micro businesses

This participatory workshop will involve a piece of service design to create a healthy prosperous neighbourhood on the edge of a large city. We aim to explore what it takes to link home-based businesses together so that they can start to form a localised ecology – mutually beneficial networks from which jobs for young people might be created.

The new ecology of the WorkHome neighbourhood will be scoped around three concepts, each offering a generosity currently lacking in present residential areas:

• The neighbourhood consciously builds links, knowing that businesses exist to discover one another and the synergies that help products and services thrive.
• The neighbourhood consciously builds links, knowing that businesses exist to discover one another and the synergies that help products and services thrive.
• The neighbourhood supports flexible working, where networking events, skill shares, pitching practice, and social business can happen in a 24/7 framework, allowing people to design their lives to their own clocks and tailored to meet care responsibilities, their own health and creativity.

Participants will be asked to map out the working environment system on a weekly calendar, placing flexibility at the centre. The objective will be to understand the transition of flexibility within work and other facets of everyday life, and to reframe the desired flexibility for the future of workspace. The workshop will conclude with an open conversation on the different maps produced.

The results of this exercise can lead to identifying the workplace as not just a place but as a combination of movement through varying levels of intensity of qualities. It aims to restructure the working week not only in terms of elements of desirable and undesirable qualities but also in terms of time and location. With remote working even more accessible and acceptable than before, this can lead to restructuring our cities to enhance this balance.

Main stage – Closing keynote plenaries

Session 42
Closing keynote panel – The future healthy city
Chair: Jeremy Myerson, Royal College of Art, UK

17.00–18.00
In a rapidly urbanised world struggling to adapt to a climate crisis and the public health emergency of a global health pandemic, how do we make our cities, communities and economies more resilient in the face of far-reaching, life-changing threats? Our panel explore how we adapt and change to prevent, avoid and mitigate against disaster to create the healthy, resilient city of the future.
REGISTRATION, SPONSORSHIP & EXHIBITION

SPONSORSHIP AND VIRTUAL EXHIBITION

Design thinking and innovation are the foundational premise of the Healthy City Design 2020 International Congress. The success of the design of a city, community, neighbourhood, home, workplace, transport system or technology, is determined largely by the design thinking, principles and insights applied. We are seeking sponsors and exhibitors that can demonstrate their innovative design thinking to solving some of the critical human and planetary health issues we face as a global society, as we enter a new reality shaped by the existential threats of climate change and a global pandemic.

We are also grateful for the fantastic support we have received from all of our existing sponsors and event partners in the transition this year from an ‘in person’ to a virtual event. There is recognition that the expert knowledge and content delivered and shared at Healthy City Design each year are more valuable and relevant than ever, during and beyond the pandemic, and their support is enabling us to increase access more affordably to many more practitioners, researchers and policy thinkers worldwide engaged in the design and planning of cities and communities.

To provide your support and build your knowledge brand as part of this global healthy city design partnership, learning environment and community, please review the packages below and contact Marc Sansom at marc@salus.global

Virtual Sponsorship package, including virtual exhibition booth: £5000
- Branding on HCD website, event literature and digital newsletters
- Branding on all HCD and SALUS social channels
- Company profile, logo and web/social links in virtual event hub
- Session sponsorship in HCD 2020 or People at Work Summit programme
- 1-year annual membership of SALUS
- Branding on virtual event lobby carousel
- Live streaming webinar facility
- Pre-recorded promotional video
- Live chat and 1-2-1 video meets
- 15 x full-event 4-day delegate passes
- Digital briefcase – corporate and product literature
- Qualified audience analytics and lead manager
- Event offer option for delegates

Virtual Exhibitor package: £2500
- Branding on HCD website, event literature and digital newsletters
- Branding on all HCD and SALUS social channels
- Company profile, logo and web/social links in virtual event hub
- Innovation showcase – live streaming webinar facility
- Pre-recorded promotional video
- Live chat and 1-2-1 video meets
- 6 x full-event 4-day delegate passes
- Digital briefcase – corporate and product literature
- Qualified audience analytics and lead manager
- Event offer option for delegates

ATTENDEE REGISTRATION

Presented in its new virtual format from 30 November – 3 December, the 4th Healthy City Design 2020 International Congress (HCD 2020), incorporating the inaugural People at Work Summit, is the world’s leading forum for the exchange of knowledge on the design and planning of healthy and sustainable cities and communities.

With access to more than 100 talks and workshops – as well as the ability to create your own personal profile and network via live chat and messaging, and video meetings – attendees will enjoy a unique professional development and networking experience with colleagues in the field of designing healthy and sustainable cities from all over the world at accessible prices.

A range of ticket types is available, giving attendees from around the globe great value for money. Attendee registration is available at www.healthycitydesign.global at the following rates:

Early bird rates (available until 5 November)
UK – 4 days: £165 + VAT
UK – 1 day: £60 + VAT

Standard rates (available from 6 November)
UK – 4 days: £225 + VAT
UK – 1 day: £85 + VAT

• Please note VAT is not applicable to tickets bought by registrants outside of the UK. UK registrants will be e-mailed a VAT invoice receipt.
For online registration and fees, please visit:
W: healthycitydesign.global

Early-bird discounts are available until 5 November 2020,
along with special discounts for public-sector delegates

For knowledge space and sponsorship enquiries, contact: info@salus.global
